## Specialised Radiology

Fedhealth is one of the few medical schemes that covers specialised radiology, for example MRI and CT scans, from the in-hospital benefit, on most options, irrespective of whether the procedure is performed in- or out-of-hospital.

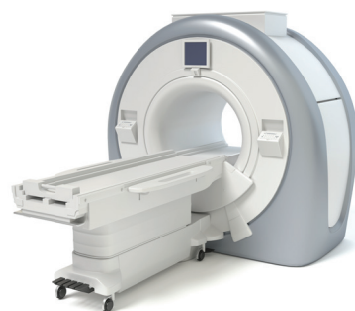

Pre-authorisation must be obtained from the Authorisation Centre on **0860 002 153**.

**Specialised radiology procedures done in-hospital require additional pre-authorisation from the Authorisation Centre:**

- CT scans
- Muga scans
- MRI scans
- Radio isotope studies
- CT colonography (virtual colonography only in credentialed practices). Limited to one per beneficiary per annum restricted to the evaluation of symptomatic patients only.
- MDCT Coronary Angiography (only in credentialed practices). Limited to one per beneficiary per annum restricted to the evaluation of symptomatic patients, only coronary and cerebral angiography.
- Any surgical procedure done with an interventional radiological procedure, e.g. Facet blocks (depending on the option).

**The following specialised radiology procedures will be covered subject to the following conditions:**

- Bone densitometry scans should be performed by a specialist limited to one per beneficiary per annum.
- Contrast and non-contrast brain scans will only be paid if ordered by a specialist. However, in case of emergencies, that is, head injuries and strokes, only non-contrast scans will be paid for if ordered by a GP.
- Full sinus scans will only be paid for if ordered by a specialist. However, limited sinus scans will be paid for if ordered by a GP.
